

# Product Developer / Technical Specialist

## ***Brabrand, Denmark***

Are you looking for a role with real variety and responsibility? At the heart of this position is the technical development of new building materials. Alongside the technical work, you will coordinate and manage development projects from ideas to implementation. The role also has a strong commercial dimension, with close collaboration across sales, customers, suppliers, and internal stakeholders. In addition, you will take ownership of the structured documentation and compliance work that supports successful product development.

### **About the role**

DAFA is strengthening its global R&D organization and is now looking for a Technical Specialist - Building Materials. This role is dedicated to supporting and developing construction solutions for the Wholesale and Prefab division. You will join the Danish R&D team and work alongside skilled, experienced, and committed colleagues in a collaborative international environment.

### **Key Responsibilities**

- You will play a key role in developing new building materials and technical solutions—from early-stage concepts and material selection to testing, validation, documentation, and industrialization.
- Working closely with production sites, suppliers, procurement, and quality, you will help ensure that new products are robust, scalable, and ready for manufacture.
- You will collaborate with the sales team to understand customer needs and expectations, bringing together technical expertise and commercial awareness.
- You will ensure compliance with requirements related to environmental documentation, building regulations, and market-specific certification schemes.
- You will contribute actively to the preparation and maintenance of Environmental Product Declarations (EPDs), Life Cycle Assessments (LCAs), CE documentation, Declarations of Performance (DoP), and country-specific approvals such as BVB and SINTEF.

### **Your Profile**

You are likely educated as a civil engineer, architectural technologist, construction manager, or in a similar technical discipline. You bring experience in product development in the building materials industry and are comfortable working in a role where responsibilities vary widely. You communicate fluently in both Danish and English, spoken and written.

You are proactive, hands-on, and structured in your approach, with an eye for both the bigger picture and the finer detail. Curious and idea-driven, you enjoy turning concepts into practical solutions. Just as importantly, you thrive in dialogue with customers, suppliers, and internal stakeholders.

# Product Developer / Technical Specialist

## DAFA offers

- A key position in DAFA's R&D department with a strong focus on product development

## Who we are

Making small invisible changes with a big impact...

### At DAFA, we seal, we absorb, and we protect.

With a passion for foam and rubber, we are specialized in making small invisible changes with a big impact. We seal cold air from hot air - and absorb sound to create silence. We dampen vibrations, and we protect objects against shocks and damage. And while our products may seem unnoticeable, they are always irreplaceable.

### It all started in 1939 in Denmark.

What began as an entrepreneurial family business producing sealing strips of bronze has today expanded into an international operation - manufacturing the unimaginable across three continents. We cut, we print, and we innovate new solutions. From small nose pads for face masks to protecting large wind turbine blades during transportation, we combine cutting-edge production equipment with great engineering skills and know-how to develop solutions geared to the demands of the future.

### But it all begins with our people.

Engineers, operators, or quality controllers. At DAFA, everyone is a master of their craft, united into a culture like a family. Our ambitions are global, but our values are practical and local.

### World-class solutions driven by our passion for innovation and sustainability.

Like our products, being visible to the world is not the most important for us. We simply care about being good at what we do and the difference we can make. We go to work every day to earn the trust of each other and our customers - together shaping the future of manufacturing by pushing the industry standards for quality and more sustainability.

We want our 'invisible' products to bring a noticeable impact and make DAFA the best in the world at what we do. Seal, absorb, and protect. One innovative solution at a time.
